Science Symposium
From Nutrients to Food Systems – Science and Communication

June 15, 2020 | Sheraton Towers Hotel, Singapore

The current global food system has been undergoing a dynamic transformation under the thrust of rapid evolution of technologies and advancing pace of innovations. Concurrently, recognition of widening gaps in nutrition wellbeing across populations in the increasingly urbanized and globalized world has given rise to concerns, on dietary related public health issues, food and nutrition security, as well as environmental sustainability. These have ignited and driven interest and research to improve our food system and in reshaping dietary behaviour, with aims toward achieving Sustainable Development Goals (SDGs) 2030.

Technological advances in the past decade have also ushered in new media landscape with an array of creative platforms for communication. These have unfortunately become fodders for pseudo-science and misinformation that generate widespread public confusion, misunderstanding and misleading guidance for consumers, especially pertaining to food, nutrition and food supply chain technological innovations. In this context, this 1-day symposium, 3rd in a series on food and technologies organized by ILSI SEA Region will bring together eminent international and regional experts, from food & nutritional science to health, economic & socio-communication researchers and planner, to share and deliberate on development that will impact our food consumption, preventative health programs and sustainable public health measures.

**PROGRAM HIGHLIGHTS**

- **KEY SCIENCE & NUTRITION UPDATES**
  Current nutritional science, continuum from nutrients research to public health guidance; discuss protein trend, optimal diet & sustainability

- **RESEARCH AND INNOVATION INSIGHTS**
  Emerging research and innovations impacting food systems and approaches to successful translation of research to application

- **GUIDANCE & STRATEGIES IN SCIENCE COMMUNICATION**
  Delivering credible science and mitigating misinformation in the evolving consumer, technology and media landscape

- **CONCRETE OPPORTUNITIES IN FUTURE FOOD SYSTEM**
  Offers an interdisciplinary platform to explore opportunities to attain healthy diets and sustainable food system to fulfil SDGs by 2030

**SYMPOSIUM FEE**

The 1-day symposium registration fee is SGD 280 per person, inclusive of symposium materials, lunch and tea breaks

**WHO SHOULD ATTEND**

- Professionals and academia in food & nutrition science, agri-food industry, food R&D and innovation, communication, regulatory, and healthcare arena
- Industry partners and technology providers
- Researchers, government officials and health policy makers
- Non-profit and research organizations
